Why choose XS-AMC4 ?

XS-AMC4: A Flexible Solution

XS-AMC4 brings even more flexibility to the concept of AMC with the use of a Network Processor which is entirely re-configurable to support new standards. The AMC standard adds modularity to the way building blocks are connected together at the system level. Support for ATM, POS, Ethernet and IP provides the user with all the options on a very compact form factor. The use of modular I/O and processing daughter cards allows for new designs implementing new functionality to be marketed in record time and cost.

XS-AMC4: A Modern Solution

Xalyo Systems' ATM and IP interfaces are based on a leading edge Network Processor handling all the data path in hardware while the control path is handled by a processor running Linux, Solaris or VxWorks®. An open API is provided on the PCI bus which makes the solution plug and play on virtually any platform, any processor, and any operating system. All the software and drivers are backward compatible with all the Xalyo System PMC and AMC family for an easy upgrade from PMC to AMC.
